LO: To research how each of our three great queens became queen.

# Glossary

**Monarch** - The person who is King or Queen

**Hereditary** - Something that is passed down in the family.

**Inherit** - Something that you are given from a family member who has died

## How is the British crown inherited?

Britain has a hereditary monarchy. This means that the role of king of queen is passed down in the family. There are special rules to decide who can inherit the crown. The monarch's first child is first in line to the throne. This child is the Prince or Princess of Wales, currently Prince Charles. He will become the monarch when Queen Elizabeth II dies. Charles' first child Prince William, is second in line to the throne. Prince William's son George is third in line. Until Prince George grows up and has children of his own, Princess Charlotte is fourth in line. There are hundreds of further royals in line to the throne just in case, including Prince William's younger brother Prince Harry, who is now fifth, but they are very unlikely to inherit the throne.

I do

There are _____ to decide who can inherit the crown.
