15

22

9

9

4

$$10 + 10 + 4 = 24$$

$$24 - 2 = 22$$

$$10 + 10 + 2 = 22$$

Each star is worth 10 points!

What is Mo's highest possible score?

What does Mo score?

How many more points does Mo need to get to 100?

Each star is worth 10 points!

What is Mo's highest possible score? 100

What does Mo score? 50

How many more points does Mo need to get to 100? 50

Each star is worth 10 points!

What is Annie's highest possible score?

What does Annie score?

How many more points does Annie need to get to 100?

Each star is worth 10 points!

What is Annie's highest possible score? 100

What does Annie score? 30

How many more points does Annie need to get to 100? 70

Each star is now worth 5 points!

What is Dora's highest possible score?

What does Dora score?

How many more points does Dora need to get to 100?

Each star is now worth 5 points!

What is Dora's highest possible score? **50**

What does Dora score? **35**

How many more points does Dora need to get to 100? **65**

9 m

$$25 + 9 = 34$$

A red oval highlights the number 25 in the equation above. Below the oval, the number 25 is decomposed into 5 and 4, with arrows pointing from the 25 to each. The equation $5 + 4$ is shown below the oval.

$$\square + \square = \square$$

$$35 + 9 = \square$$

$$40 + 9 = \square$$

$$80 + 9 = \square$$

$$95 + 9 = \square$$

$$99 + 9 = \square$$
