Match the inverse calculations.

$$623 + 1,240 = 1,863$$

$$2,483 - 623 = 1,860$$

$$1,860 + 1,240 = 3,100$$

$$2,483 + 617 = 3,100$$

$$1,860 + 623 = 2,483$$

$$3,100 - 1,860 = 1,240$$

$$3,100 - 2,483 = 617$$

$$617 + 1,866 = 2,483$$

$$2,483 - 617 = 1,866$$

$$1,863 - 1,240 = 623$$

Teddy is working out $5,671 + 325$

		Th	H	T	O	
		5	6	7	1	
	+	3	2	5		
		8	9	2	1	

Teddy checks his calculation using the same addition.
Is this a good idea? What mistake has Teddy made?
