The problem – What is affecting planet Earth?	Introduce MC – Seb, 14yr, saved planet earth. How? 2 yrs ago, Golden cove, turtle pic for his insta, rocky dunes, clear, blue ocean, children laughing, lapping waves, Ran to beach but skidded to a halt, everywhere he looks in plastic, all the sand is covered. Makes it to the sea, more plastic bottles that don't belong there. Seb feels angry – no turtles today. Remembers seeing the loggerhead turtle, future generations won't have chance if plastic pollution continues.	
How is the problem solved?	Upset, runs to his dad. As he tells him the problem an idea forms. Ask to see Uncle Eddie. Begins to develop idea as walking back to the car – biodegradable bottles for everything eg cleaning products, drinks. Uncle Eddie make biodegradable food bags, is there a way to strength and shape the material? Spent months with Uncle Eddie developing it – produced a product that not only held its shape but was biodegradable, right down to the lid.	
What happens when people find out about the solution?	Posted his solution on Instagram and tag Uncle's Company. Within 2 hours the post had gone viral – David Attenborough was even sharing it. Manufactures want a meeting. The love it, want to patent the idea. Large scale production – big companies interested eg pepsi Gains more insta followers – people tagging him showing others cleaning up beaches around the world.	
What is the world like now the problem is solved?	Now, 2 years down the line, 100's of companies use his bottles with 100s more pledging only to use biodegradable plastic. Met David Attenborough Went back to Golden Cover with Dad and Uncle Eddie and got his turtle picture.
