L.O: To publish.

We do

We are going to publish our writing on a double page spread.

Look at some examples on the next few slides.

How are they organised?

What features can you see?

Welcome to the Jungle!

Have you ever wondered what a rainforest is? The beautiful butterflies, venomous snakes, outstanding orchids, colossal trees, insects and the powerful rainfall. One tiny piece of wildlife can make a big impact on the world. Are these really the wonders of the world? Read on to find more information that will make you astonished!

What is a rainforest?

A rainforest is a forest that receives rainfall, which can lead up to 80 inches. Rainforests are composed out of millions of unique ecosystems. These beauties of the world, are the most lush, fertile places on earth that feed on many plants and ~~wild~~ animals.

Where are the rainforests of the world?

The rainforests of the world are the Amazon, Congo, Daintree. The best known rainforests are the tropical and the jungle. Tropical rainforests still receive at least 2000mm of rainfall because of the heat.

Fun fact: Did you know:
Some plants grow piggyback on them.

The Amazon:

The Amazon is a very popular river. Its climate is 18°C - 22°C because of its rainfall. This river is located covering mostly up to 80 inches. This beautiful place attracts gorgeous sights and splendid orchids that bloom up. Also, at the river ripples down the river. If you ever get to see this place you will be blown away.

The Amazon River is very humid and dry. Rainfall can gather up to 80 inches. This beautiful place attracts gorgeous sights and splendid orchids that bloom up. Also, at the river ripples down the river. If you ever get to see this place you will be blown away. The Amazon is the biggest tropical rainforest. The Amazon lies between the two equators, ~~canon~~ capricorn.

The Amazon

The Amazon located on a map.

THIS way to the jungle

Did you know:

LIFT ME!

I am learning to write a non-chronological report.

PRETTY PARROTS

Parrots are pretty ^{exotic} birds that are known for ^{their} ~~pretty~~ ^{bright} ~~colours~~ ^{vibrant} ~~voices~~. A bird is a feathered animal with two wings and a beak. There are about 312 different types. Here are some names of parrots: the Cockatoo, lovebird, Parakeet, Kea, Lorikeet and the King Parrot. They are ^{some of the} ~~the~~ most intelligent birds because they can learn and copy of human voices. ^{the average} ~~the~~ parrot's life span is about 80 years or more. That's interesting! Read on to discover more about a parrot's life.

Physical appearance

A parrot's physical appearance are all ^{unique} ~~unique~~. They all have fascinating patterns and colours. A parrot must have curved bills, strong little legs and clawed feet. Their most distinctive feature is their colour. You can probably see them from far away since their colours stand out. These magnificent creatures have curved bills to peck food from high trees and talons to grip on branches. Did you know that the smallest parrot is a Buff-breasted pygmy which is only 8cm. That's smaller than a ruler. An average size of a parrot is 1m from head to its tail feather.

A parrot's app habitat

These kinds of parrots are most likely to be found in the Southern Hemisphere in tropical rainforests. A rainforest is a dense tropical forest which rains a lot. The weather there is hot and sticky and there is always chance of rain. These Parrots live in the canopy layer of the forest rainforests to be protected from predators that try to hunt them. A parrot predator is hawks, eagles, owls, snakes and rats. Big cats. Parrots come from Mexico, Australia and South America.

Fast facts	
Life Span	60-80 yrs
Group name	Pandemonium
Classification	neotropical
Diet	omnivorous
Height	3.5-60cm

12.06.19

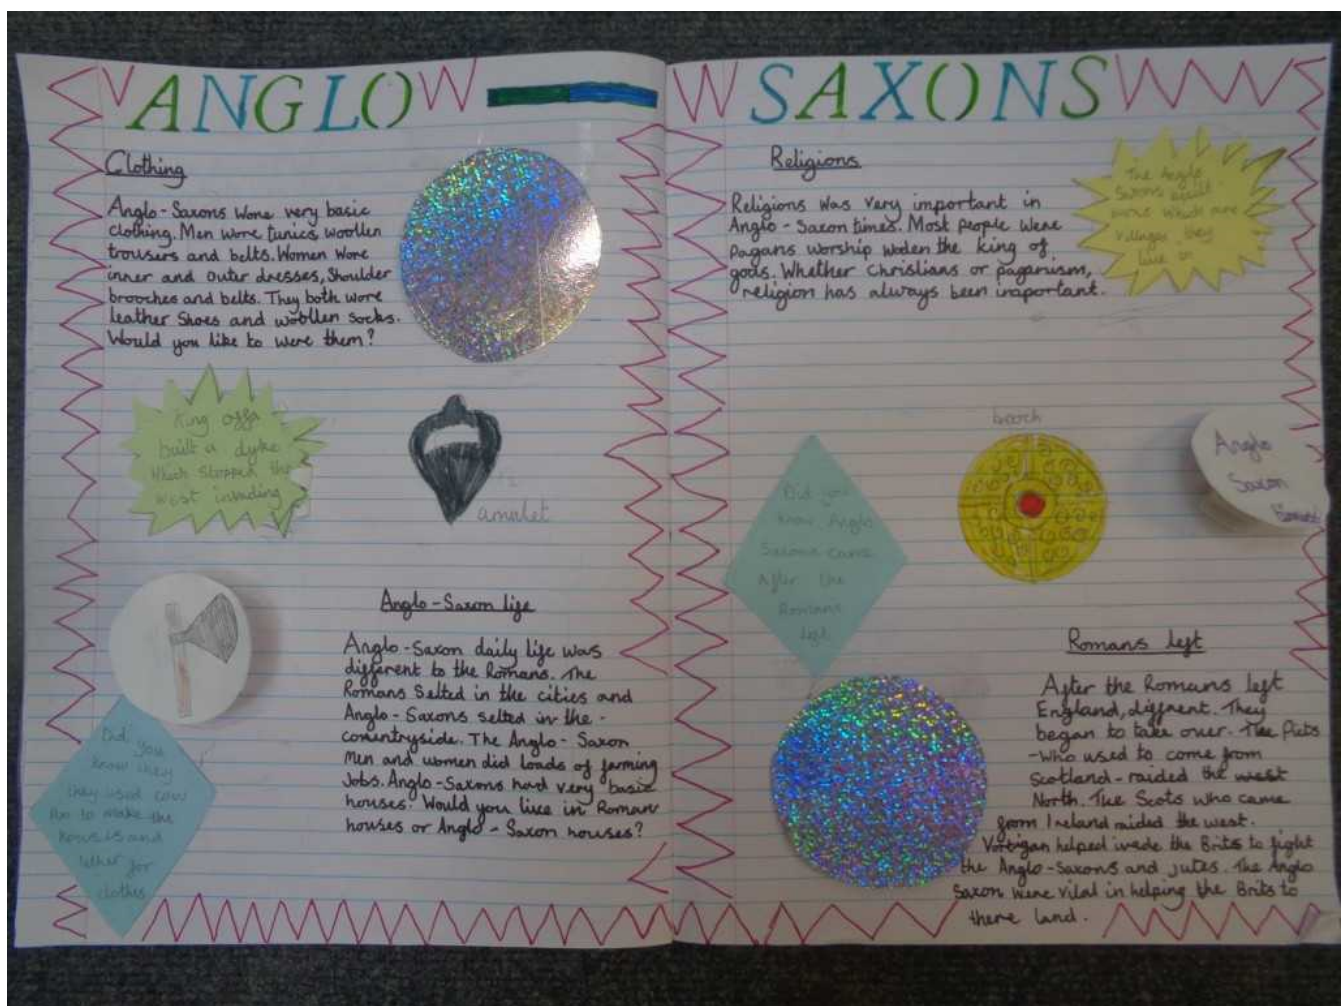

What do parrots eat?

A parrot is an omnivore which eats plants and meat. These creatures are ^{omnivorous} ~~omnivorous~~ since they eat nuts, fruit, seeds and insects. They use their beak to peck food from trees and using their strong jaws they snap nuts/shells with no problem to get inside the shell. An average parrot can eat up to 15-20% of their body weight.

This is a parrot eating.

Did you know that a parrot is the only bird that can eat with its talons?

You are going to create your own

You do

double page spread about the habitat you have chosen.

Things to think about:

- Take your time - you have 2 lessons to do this!
- All writing must be done in your normal pen/pencil
- Make the title stand out
- You can make flaps/ pull out sections if you like (3 maximum)
- Think carefully about where your pictures will be placed (you can draw extra if you like!)
- All colouring must be done (neatly!) in pencil crayon. Only colour after all your writing is done.
