L.O: To explain the earth's resources by summarising information.

Do we share the earth's resources equally?
Do we dispose of our waste fairly?

Let's hand out and look at our
Geography Learning Organisers.

What are the earth's resources?

A natural resource is something that is found in nature and can be used by people. Earth's natural resources include light, air, water, plants, animals, soil, stone, minerals, and fossil fuels. People need some natural resources to stay alive. They use others to make their lives better.

Every place on Earth has its own unique group of natural resources. Some countries have lots of oil or diamonds

What are Resources?

- Natural Resources

- The resources the Earth provides to us.

- Air, Water, & Land
- Animals & Plants
- Minerals & Rocks
- Energy Sources
 - Oil, Shale, Gas, Wood
 - Wind, Animal, Water

Stick in the picture of the earth
and write the earth's resources
around it.

Your writing must be on a line!

Read the text about renewable and non-renewable resources.

Think about the key questions below:

- What is a renewable resource?*
- What is a non-renewable resource?*
- What are the advantages/disadvantages?*

Renewable ResourcesWhat is a renewable resource?

In your books answer the key questions.
Use headings and subheadings, just like we
have done together to present the
information.

An adult may give some of you a table to
help present your work.

You do
