L.O: To explain the life cycle of a mammal.

Stick in and complete your starter!

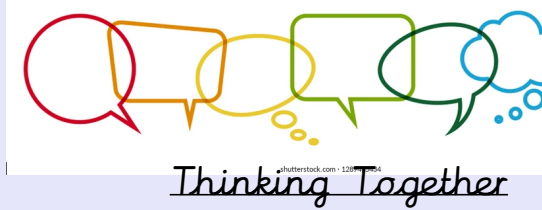

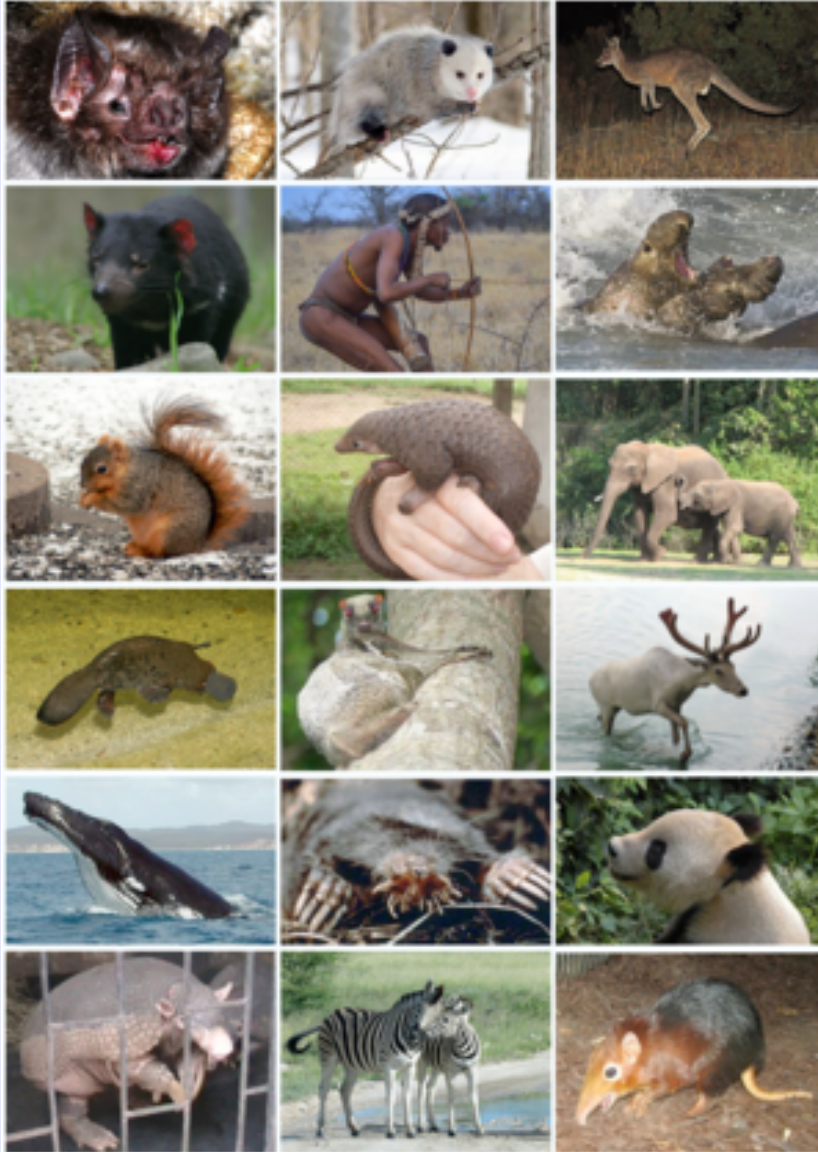

## What are the characteristics of a mammal?

A mammal is an animal that breathes air, has a backbone, and grows hair at some point during its life.

In addition, all female mammals have glands that can produce milk.

## How many examples of different species of mammals can you name?

Read the text life cycle of a human.

Complete these sentences as you read.

The first stage of a human life <sup>Cycle</sup> cycle is infancy

babies can not do anything for themselves.

Toddler stages are from ages 1 to 3.

The later stage of a human life cycle is elderly.

Let's summarise the information to explain the life cycle of a human.

I do

At first... humans are an unborn fetus.

Following... they become babies

After a few years... they become toddlers, then children

In time... They grow into adults.

Eventually.. they become elderly adults.

**At first** all humans start off their life as a foetus. A foetus develops in the womb and receives its nutrients through the umbilical cord.

**Following** on from this stage a foetus develops into a baby. When a baby is born they can not do anything for themselves, such as: feeding, walking and talking.
