Does Fewer Miles Always Mean Better for the Environment?

What do you think?

Are you surprised by this?

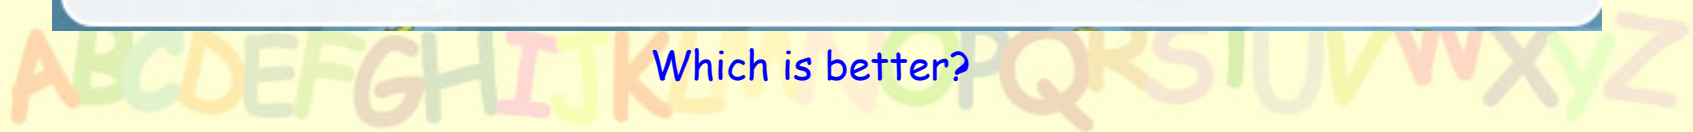

- During the UK winter, lettuces in Spain are grown outside.
- In the UK, lettuces are grown in the field in summer and in greenhouses in winter.
- Greenhouses use a lot of energy for heating and lighting – causing more CO₂ than driving the lettuce by truck from Spain to the UK.

Fresh UK broccoli released less CO₂ than fresh Spanish broccoli, but freezing the UK broccoli increased the CO₂ to the same level as the Spanish produce.

Which is better?

Look at one of the products we have today.

I do

Where did this item come from? How many airmiles did it take for this item of food to reach us in the UK? Use the website below.

Plot the items journey on your map. You can use your map handout (labelled) to help.

What Are the Benefits of Importing Food?

Importing foods means we have a varied, healthy diet so people get less ill.

Importing food protects us against the effect of a poor UK harvest.

Importing food provides a market for foreign farmers' produce, boosting the foreign economies.

Importing foods means supermarkets can negotiate lower prices, which means we pay less for our food.

Foods that only grow in certain seasons in the UK are available all year round.

Answer the questions in your book using full sentences.

- 1) Do you think we should import food from abroad?
- 2) What are the benefits of importing food?
- 3) What are the risks/negatives of importing food?

ABCDEFGHIJKLMNOPQRSTUVWXYZ

Extra:

An alternative to importing food is to eat as much indigenous, seasonal produce as possible.

Research on ipads what produce is available in the UK at different times of the year.

Make a record in your books.

What foods cannot be grown or produced in the UK?
