LO: To calculate change

Today, we are going to be looking at a different method we could use to subtract money.

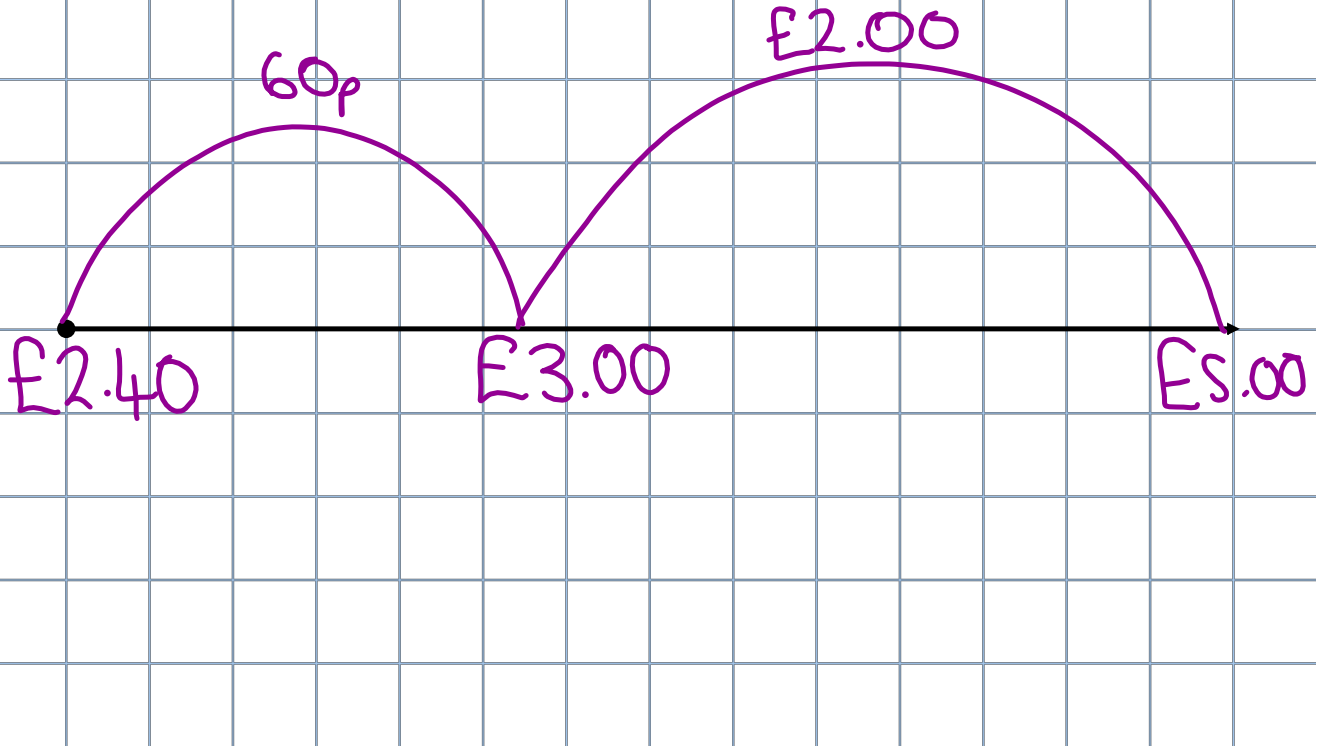

We have been using column method, but we can also use different methods to help us

If we are subtracting numbers from a whole pound number, like £5.00 or £10.00, it could be easier to count up on a number line.

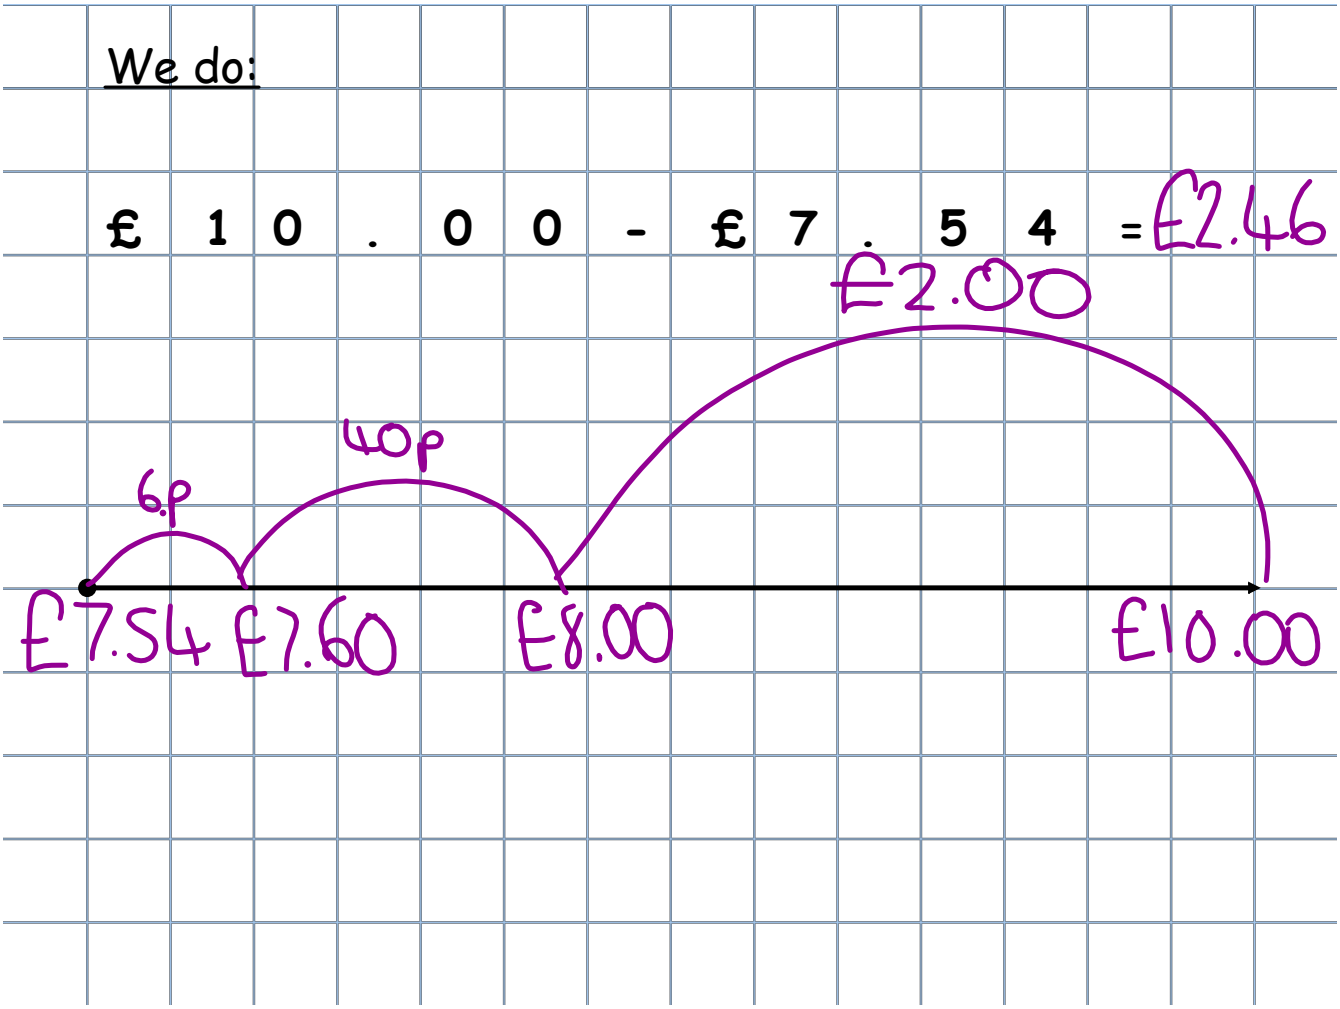

I do:

£5.00 - £2.40 = £2.60

We do:

£10.00 - £7.54 = £2.46

We do:

£10.00 - £7.54 =

We do:

£5.00 - £3.45 = £1.55
