

1	9	.	1	1	.	2	0							
---	---	---	---	---	---	---	---	--	--	--	--	--	--	--

LO: To subtract

Do you remember how we use column method for subtraction?

Sometimes, when we use column method for subtraction, we need to exchange a ten for 10 ones.

	4	4	3	-	8	=									

1	6	7	-	9	=
---	---	---	---	---	---

1.	4	4	5	-	9			5.	3	5	7	-	9		
2.	1	5	3	-	7			6.	4	6	7	-	8		
3.	4	8	6	-	8			7.	5	9	8	-	9		
4.	7	7	2	-	4			8.	9	8	9	-	9		

Challenge:

REASONING 1

The children used partitioning to solve the calculation:

643 - 8

Who has used partitioning in the best way?
Explain how you know.

Challenge:

PROBLEM SOLVING 2
Investigate!

When 9 is subtracted from 4 in the ones column, the digit in the ones column of the answer will always be 5.

Can you collect examples to prove that this statement is correct?
