Can you point to the dots that show 3?

Can you point to 1?

Can you point to 2?

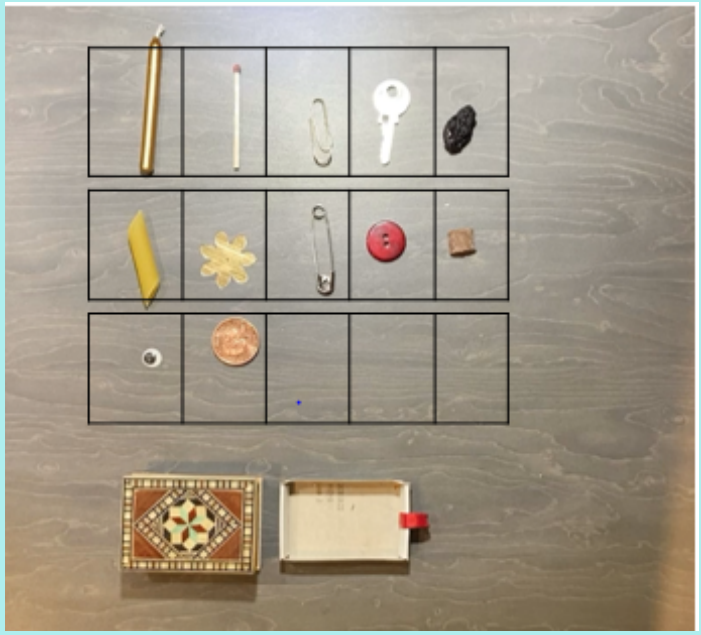

Here is a small match box. I have been looking for things that fit in my box.

How many objects do you think are in my box?

Do you think the objects are long?or short?

Lets have a look at the objects I managed to fit in my match box.

The objects are laid out in 5 frames.

How many objects are their altogether?

Can you find anymore objects that will fit in my match box?

You could go around your house or outside.

Have a think about the size of the objects and if they are small enough to fit in the box?
