Key Question

Are all animals the same?

Mar 26-09:44

Last week we learnt about fish. Today we are going to learn about the animal group called mammals.

Mar 26-09:55

Starter

Watch the short video.

https://www.theschoolrun.com/homework-help/mammals

Thinking time: What can you tell your partner about mammals from watching the video?

Mar 26-09:42

Now we are going to learn some more facts about mammals. I am going to read it to you, use a lolly stick to follow it and jump in when I get stuck on a word.

A mammal is the name for a large group of animals. There are more than 5400 different animals in this group. All mammals have hair or fur at some time in their life. Most mammals give birth to live babies and are fed on their mother's milk. Mammals are warm-blooded. This means their body heat stays the same all the time. Mammals live in lots of different places such as forests, oceans and grassland. They are found all over the world. Lots of mammals live in the wild, but we have some as pets, such as cats, dogs and even horses. Mammals come in all different shapes and sizes. They can be small like the bumblebee bat or big like the blue whale.

Mar 26-10:01

We do: Now I want you to read the information with your partner.
