

L.O. I can debug an algorithm

Success Criteria

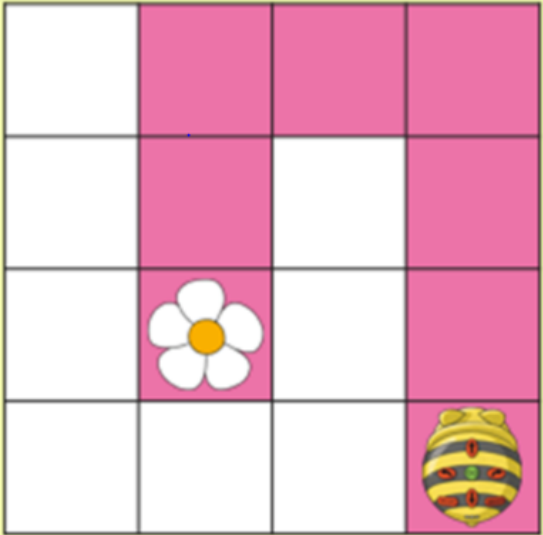

- I can check my work for mistakes to debug a program.
- I can rewrite or change my algorithm again if I need to.

I want to get my Bee-Bot to follow the purple path to the flower.
If I press the buttons shown,

Press **GO** to find out if you were correct.

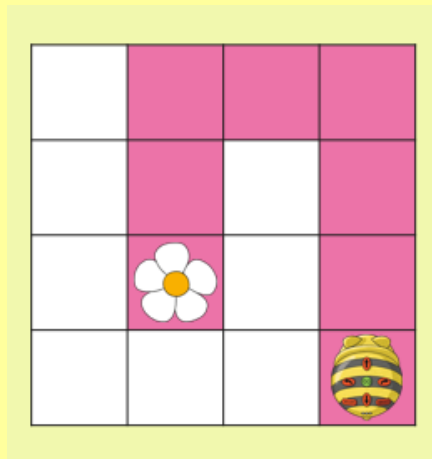

Can you draw the correct buttons to press, to reach the flower?

Did the Bee-bot reach the flower?

Why?

Which instruction was wrong?
How could we fix it?
